

Q. Machine is lock stitch or chain stitch?

This is a lock stitch embroidery machine.

Lock stitch ensures strong, precise, and durable embroidery, making it suitable for garments, caps, logos, and fashion embroidery.

Q. Is the embroidery machine lock stitch or chain stitch?

Duke Jia **embroidery machines use lock stitch**, which ensures **strong, neat, and durable embroidery** on garments, caps, and textiles.

Q. Is this machine lock stitch or chain stitch?

It depends on the machine type:

- **Embroidery machines (DY-1201 series, multi-head models)** use **lock stitch**.
- **Quilting machine (DY-CS3000)** uses **chain stitch**.
- **Perforation machines (DY-SK-D2 series)** do **not use stitches** — they punch holes using knives.

Q. Is the quilting machine lock stitch or chain stitch?

The **DY-CS3000 quilting machine** uses **chain stitch**, ideal for **joining multiple fabric layers** in mattresses, quilts, and padded products.

Q. Is the perforation machine lock stitch or chain stitch?

Perforation machines like **DY-SK-D2-2.0RH** and **DY-SK-D2-10Z** **do not stitch at all**. They use **mechanical punching knives (0.8–2.5 mm)** to create holes in leather and upholstery.

Q. What is the bed size of DY-1201?

The **DY-1201** has a **350 × 500 mm embroidery bed size**, suitable for T-shirts, caps, uniforms, and logos.

Q. What is the bed size of DY-1201S?

The **DY-1201S** offers a **300 × 350 mm bed size**, ideal for compact shops, small logos, and cap embroidery.

Q. What is the bed size of DY-1201L?

The **DY-1201L** provides a **400 × 600 mm bed size** (expandable up to **500 × 800 mm**) for jackets and decorative embroidery.

Q. What is the bed size of DY-1201H?

The **DY-1201H** has a **500 × 400 mm bed size**, designed for heavy fabrics like denim and canvas.

Q. What is the bed size of DY-1201XL?

The **DY-1201XL** features a **500 × 1200 mm bed size**, ideal for long panels, curtains, and jacket backs.

Q. What is the bed size of HALO-100?

The **HALO-100** has a **240 × 320 mm bed size**, suitable for light professional and boutique embroidery.

Q. What is the bed size of ES-1300?

The **ES-1300** offers a **130 × 180 mm bed size**, intended for labels, monograms, and small craft embroidery.

Q. What is the bed size of DY-1201+1CT?

The **DY-1201+1CT** has an approximate **560 × 1200 mm bed size**, supporting flat embroidery plus chenille/chain stitch.

Q. What is the bed size of DY-1201+1PD?

The **DY-1201+1PD** also offers around **560 × 1200 mm**, used for flat embroidery with coiling/taping.

Q. What is the bed size of DY-601CTM?

The **DY-601CTM** provides a **500 × 800 mm bed size** for chenille and chain-stitch embroidery.

Q. What is the bed size of DY-602+2?

The **DY-602+2** features a **600 × 600 mm bed size**, combining flat embroidery with sequin, bead, and coiling work.

Q. What is the bed size of DY-606+6?

The **DY-606+6** also uses a **600 × 600 mm bed size**, supporting multiple decorative attachments.

Q. What is the bed size of DY-1202H?

The **DY-1202H** has a **500 × 500 mm bed size per head** for heavy-duty embroidery.

Q. What is the bed size of DY-1202HC?

The **DY-1202HC** offers a **400 × 800 mm bed size per head**, ideal for wide panels and borders.

Q. What is the bed size of DY-1203H / DY-1204 / DY-1206 / DY-1206H?

These models provide a **400 × 450 mm bed size per head**, optimized for bulk garment production.

Q. What is the bed size of DY-908 / DY-912?

Both models have a **400 × 450 mm bed size per head**, suitable for mid- to large-scale embroidery.

Q. What is the bed size of DY-915-120?

The **DY-915-120** features a **400 × 1200 mm bed size per head**, ideal for long designs.

Q. What is the bed size of DY-918-120?

The **DY-918-120** offers a **400 × 800 mm bed size per head** (with extended X-travel up to 1200 mm).

Q. What is the bed size of the perforation machines?

- **DY-SK-D2-2.0RH** — **900 × 600 mm working bed**, 12 punching heads.
 - **DY-SK-D2-10Z** — **900 × 600 mm working bed**, 10 punching heads.
- Both are used for **leather, PU, PVC, and upholstery perforation**.

Q. What is the bed size of the quilting machine?

The **DY-CS3000** quilting machine offers a **2450 mm quilting width**, suitable for mattresses, quilts, and padded textiles.

Q. What is the stitch length?

The stitch length is **digitally controlled**, with a typical range of:

- **1.5 mm to 12 mm**
- It depends on the machine type: **Embroidery machines** use computerized stitch control (stitch length is set automatically by the design), **quilting machines** allow a defined stitch length range, and **perforation machines don't stitch**—they punch holes.

Q. What is the stitch length in Duke Jia embroidery machines?

Duke Jia embroidery machines are **computerized lock-stitch systems**—the stitch length is **automatically controlled by the design file** and machine settings, rather than a fixed manual stitch length.

Q. Can I adjust stitch length in embroidery?

Yes—stitch density/length is adjusted through the **design software (DST pattern settings)** and fine-tuned on the machine controller for quality and fabric type.

Q. What is the stitch length of the DY-CS3000 quilting machine?

The **DY-CS3000** supports an adjustable **stitch length of 3–8 mm**, suitable for mattresses, quilts, comforters, and padded products.

Q. What is the stitch length of the perforation machine?

Perforation machines **do not stitch**, so there is **no stitch length**. They use **punching knives (0.8–2.5 mm)** to create holes in leather/PU/PVC.

Q. What is the production capacity?

1000 average stitches per minute in production.

Q. What is the production capacity of perforation machines?

Capacity depends on **holes per design + punching speed + feed time**. DY-SK-D2 series runs up to **1300 RPM** and uses **multi-head punching** for high-volume leather perforation.

Q. What is the production capacity of the DY-CS3000 or quilting machine?

The DY-CS3000 delivers an operation speed of **60–260 meters/hour** (depending on pattern and thickness), making it suitable for **mattresses, quilts, and padded textile production**.

Q. What devices can be attached to the machine?

Yes, the machine supports multiple external and optional devices, including:

- Sequin device
- Cording device
- Beads / pearls device
- Laser pointer positioning system
- Cap embroidery attachment
- Flat & tubular frames
- USB & network connectivity.
- it depends on the machine type. **Embroidery machines** support multiple decorative attachments,

Q. What attachments are available embroidery machines?

embroidery machines can be fitted with:

- **Sequin device** – for shiny decorative embroidery
- **Bead device** – for fashion and bridal designs
- **Cording device** – for raised cord embroidery
- **Coiling device** – for rope-style patterns
- **Taping device** – for tape and ribbon embroidery
- **Chenille / Chain-stitch device** (model-specific)
- **Rhinestone device** (select models)
- **Cap frames, flat frames, tubular frames.**

Q. What attachments are available for Duke Jia embroidery machines?

Duke Jia embroidery machines can be fitted with:

- **Sequin device** – for shiny decorative embroidery
- **Bead device** – for fashion and bridal designs
- **Cording device** – for raised cord embroidery
- **Coiling device** – for rope-style patterns
- **Taping device** – for tape and ribbon embroidery
- **Chenille / Chain-stitch device** (model-specific)
- **Rhinestone device** (select models)
- **Cap frames, flat frames, tubular frames**

Q. What devices can be attached to a perforation machine?

Perforation machines do **not use embroidery attachments**.

They use **interchangeable punching knives/tools (0.8–2.5 mm)** for different hole sizes and patterns, along with **CNC control systems** for digital design execution.

Q. What devices are supported on DY-PE750×600?

The **DY-PE750×600** supports:

- **Embroidery head (9 needles)** for stitching
- **Perforation head** with punching knives (0.8–2.5 mm)
It allows **both embroidery and perforation in one setup**, ideal for leather, footwear, and automotive interiors.

Q. What devices are supported on Embroidery + Perforation?

it supports:

- **Embroidery head (9 needles)** for stitching
- **Perforation head** with punching knives (0.8–2.5 mm)
It allows **both embroidery and perforation in one setup**, ideal for leather, footwear, and automotive interiors.

Q. What devices are used on the quilting machine?

The **DY-CS3000** uses **multi-needle chain-stitch quilting heads**, pattern rollers, and quilting frames.

It does **not use embroidery attachments** like sequins or beads.

Q. What is Sequin device?

Sequin device uses small shiny discs stitched onto fabric for a sparkling effect. It's commonly used in **fashion wear, bridal garments, stage costumes, and decorative textiles.**

Q. What is Bead device?

A. Bead device attaches beads onto fabric along the stitch line to create **raised, premium designs.**

Popular in **bridal wear, ethnic garments, couture fashion, and luxury accessories.**

Q. What is Cording device?

Cording device stitches a decorative cord onto the fabric, creating **bold, raised outlines.** Used for **logos, uniforms, emblems, jackets, and decorative borders.**

Q. What is Coiling device?

Coiling device forms continuous rope-like patterns by laying a thicker cord onto the fabric. Ideal for **ethnic wear, designer garments, home décor, and ornamental designs.**

Q. What is a laser pointer positioning system?

A **laser pointer positioning system** helps accurately align the fabric and design before embroidery starts.

It improves **placement accuracy**, reduces material wastage, and speeds up setup for logos and precise designs.

Q. What is a cap embroidery attachment?

A **cap embroidery attachment** allows embroidery on **caps and hats** using a **270° rotating cap frame.**

It ensures stable stitching on curved surfaces and is commonly used for **sports caps, promotional caps, and uniforms.**

Q. What are flat and tubular frames?

- **Flat frames** are used for embroidery on **fabric panels, jackets, bedsheets, and cut pieces.**
- **Tubular frames** allow embroidery on **finished garments** like T-shirts, polos, hoodies, and bags without opening seams.

Q. What is USB and network connectivity in embroidery machines?

USB and network connectivity allow easy transfer of embroidery design files (DST, etc.) from a computer to the machine.

They support **fast file loading, design management, and multi-machine networking** in factory environments.

Q. Can I attach external devices to the machine?

Yes, external devices can be attached to the machine, depending on the model and application.

Q. Why is lock stitch used in embroidery?

Lock stitch is used in embroidery because it creates **strong, neat, and durable stitches** that don't unravel if a thread breaks.

It ensures **clean design definition, long-lasting quality**, and consistent results on garments, caps, and textiles.

Q. Why is chain stitch used in quilting?

Chain stitch is used in quilting because it allows **high-speed stitching and flexibility** while joining **multiple fabric layers.**

It provides **excellent coverage, elasticity, and productivity**, making it ideal for **mattresses, quilts, and padded textiles.**

Q. Which stitch is stronger?

Lock stitch = stronger & durable (embroidery)

Chain stitch = faster & flexible (quilting)

Q. What is an external device?

An **external device** is an **additional attachment or accessory** that can be connected to the embroidery machine to **expand its functionality beyond standard embroidery**.

Common external devices include:

- **Sequin device** – attaches sequins during embroidery
- **Bead / pearl device** – adds beads or pearls automatically
- **Cording / coiling device** – embroiders cords and ropes
- **Laser pointer system** – helps accurately position designs
- **Cap embroidery attachment** – enables embroidery on caps and hats
- **Flat & tubular frames** – support different fabric types and shapes
- **USB / network modules** – allow digital design transfer
